Project Title: Egyptian Language Website

I'd like to build this site as look at the progression of the Egyptian Language throughout history, which is clearly outlined in the Wikipedia page. Navigation at the top would contain between 5 to 7 categories—I have taken multiple classes either on or relating to this topic, and feel I have a good grip on what content would be relevant.

1. Home page: introduction to the culture and some Egyptian traditions (in general)
2. Hieroglyphics: the first stage of the language, beginning as far back as 6,000 years ago
3. Hieratic: the first form of script, essentially taking pictures and putting them into words
4. Demotic: a more colloquial form of Hieratic
5. Coptic: Further iteration of the Egyptian script, combined with Greek letters
6. Arabic: Last (and current) language spoken in Egypt, was introduced via the Arab conquest in 709 CE
7. Sources: may put the sources at the bottom of each page, or may have a separate navigation tab for the sources used
